

Handing Off a Call to Device

The following will give you step-by-step instructions for handing an active call over to a device. This is useful if you are on a call, but need to leave and finish the call on your mobile phone. Note: You must already have the device established for this to be successful.

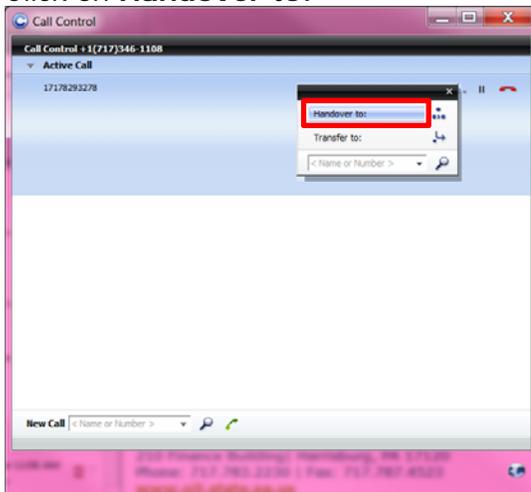

1. During an active call, locate your **call control box**. If it is not on your screen, you may click the icon on your Fusion toolbar.

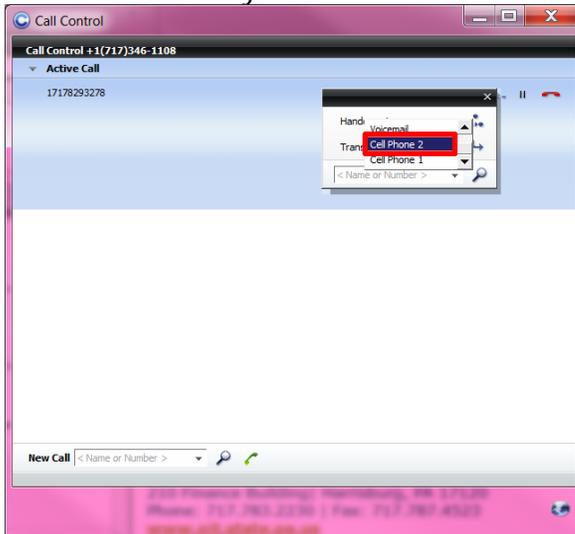

2. Press the arrow icon next to the active call.

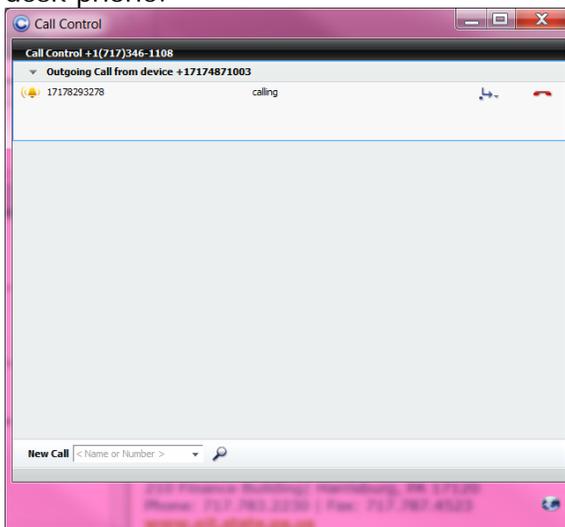

3. Click on **Handover to:**

4. Select the device you would like to hand the call over to.

5. The system will initiate a call to your chosen device and then disconnect from your desk phone.

Helpful Hint: See instructions "Setting a Device" for step-by-step instructions on creating a Device.
