1. Purpose

This Information Technology Policy (ITP) establishes enterprise-wide standards and policies for Business Intelligence (BI) Reporting. Establishing standards will provide guidance to agencies as they plan for new application development projects or make investments in existing applications.

2. Scope

This ITP applies to all offices, departments, boards, commissions and councils under the Governor’s jurisdiction (hereinafter referred to as "agencies"). Agencies not under the Governor’s jurisdiction are strongly encouraged to follow this ITP.

Third-party vendors, licensors, contractors, or suppliers shall meet the policy requirements of this ITP that are applicable to the products and services provided to the Commonwealth.

3. Background

Reports deliver information that meet fundamental business requirements and are a common element of nearly all application implementations. Reporting tools provide web-based viewing of reports, scheduling and automated distribution of reports, and security of both reports and the data within the reports. This ensures that consumers are able to view applicable reports.

STD-INF011A Reporting Product Standards provides guidance to agencies on the current standards and the status of other reporting solutions that are being used or being considered for use.

GEN-INF011B Reporting Product Availability provides information on the availability and licensing of current reporting product standards.

Agencies requiring reporting solutions shall use one of the current standards defined in STD-INF011A Reporting Product Standards.

4. Definitions

4.1 Business Intelligence (BI) Report – The process of utilizing BI software to collect, visualize, and analyze business data for the purpose of finding relevant and actionable insights into operational or business trends.

4.2 Information Silo – An information management system that is unable to freely communicate with other information management systems. Communication within an Information Silo is always vertical, making it difficult or impossible for the system to work with unrelated systems. Information Silos occur
when different individuals or groups generate or record new data, but don’t integrate or aggregate that information for other parts of the business to view or use in a strategic way. Additionally, it occurs from the tool sprawl and the poor or no integration of business applications and processes.

5. Policy
In the implementation of a reporting solution, application performance and operational database server utilization are to be analyzed for current and anticipated future levels to determine if the reporting solution requires a dedicated data store.

Agencies shall standardize on the current architecture products identified in STD-INF011A Business Intelligence Reporting Product Standards.

Agencies shall not intentionally create Information Silos. Agencies shall coordinate with the Commonwealth Data Officer to incorporate reporting data stores for enterprise-class applications into a broader BI framework. See STD-INF010 Business Intelligence Policy.

Agencies shall coordinate with the Office of Administration, Office for Information Technology (OA/OIT) to analyze security requirements for all reporting solution implementations.

Agencies shall coordinate with OA/OIT to ensure report users can only view reports they are entitled.

Agencies shall ensure only the data required for their business process is collected and retained per the agency record retention plan.

Agencies shall review and update their records retention plan with every implementation of BI Reporting.

Agencies shall ensure the appropriate level of security controls are applied to all BI Reporting implementations.

Agencies shall coordinate with OA/OIT to ensure all users are authenticated and authorized in accordance with all laws, statutes, executive orders, management directives and policy.

Agencies may not implement a BI Reporting instance requiring authentication that does not leverage enterprise access management solutions.

6. Responsibilities
6.1 Agencies shall comply with the requirements as outlined in this ITP.
6.2 OA/OIT shall comply with the requirements as outlined in this ITP.
6.3 Third-party vendors, licensors, contractors, or suppliers creating custom applications on behalf of Commonwealth entities shall comply with the requirements as outlined in this ITP.

9. **Publication Version Control**
It is the **Authorized User**’s responsibility to ensure they have the latest version of this publication, which appears on [https://itcentral.pa.gov](https://itcentral.pa.gov) for Commonwealth personnel and on the Office of Administration public portal: [http://www.oa.pa.gov/Policies/Pages/default.aspx](http://www.oa.pa.gov/Policies/Pages/default.aspx). Questions regarding this publication are to be directed to RA-ITCentral@pa.gov.

10. **Exemption from This Policy**
In the event an agency chooses to seek an exemption from the guidance within this IT policy, a request for a policy waiver is to be submitted via the enterprise IT policy waiver process. Refer to [ITP-BUS004 IT Policy Waiver Review Process](https://itcentral.pa.gov) for guidance.

This chart contains a history of this publication’s revisions. Redline documents detail the revisions and are available to CWOPA users only.
