

## HOST CHECKER

### McAfee Antivirus for Commonwealth-Issued Devices

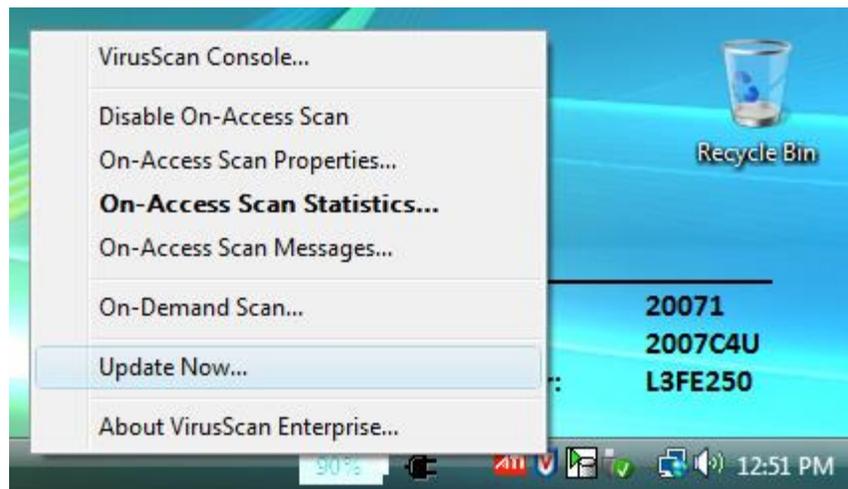

This document is for Commonwealth devices that need to have manual updates of the McAfee anti-virus. By default, this software is set to automatically update itself twice a day and scans each file before it is written to disk. This guide is for users who want to manually update their DAT (virus definition) files and/or manually scan their entire (full scan) computer.

#### How to Manually Update McAfee DAT Files

1. Locate the V-Shield (blue/white shield with a red "V" on it) icon in the system tray (lower-right corner of the Windows taskbar, next to the clock) and **right-click** it.

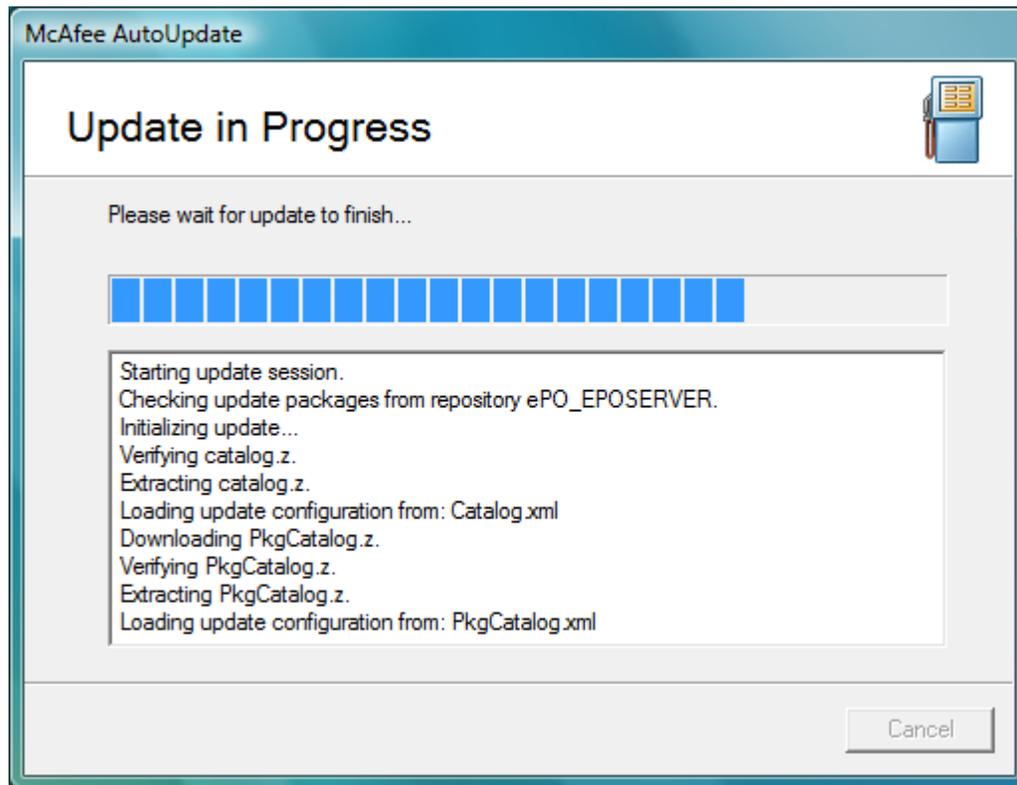

2. On the context-menu that pops up, select "Update Now..."

3. The updating window will open and McAfee will update to the latest DAT files and patch level if newer versions are available. This will take a few seconds to a few minutes depending on the amount of updates as well as network and computer speed.

## How to Manually Update McAfee DAT Files (cont'd)

4. Thirty seconds after the update has completed, the update window will automatically close. The VirusScan DATs and patch levels should now be at the latest version.

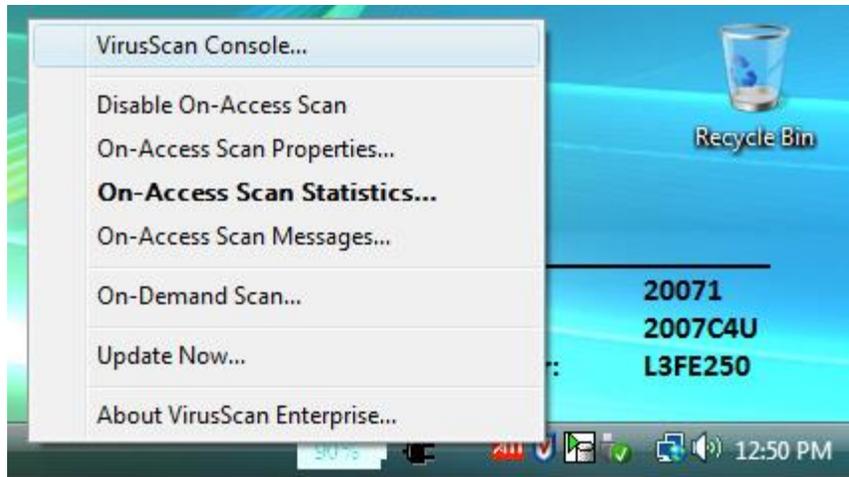

### How to Manually Run a Full System Scan

1. Launch the VirusScan Console. This can be done two ways. Option A: **Right-click** the system tray icon and select "VirusScan Console..." Option B: Click Start → All Programs → McAfee → VirusScan Console.

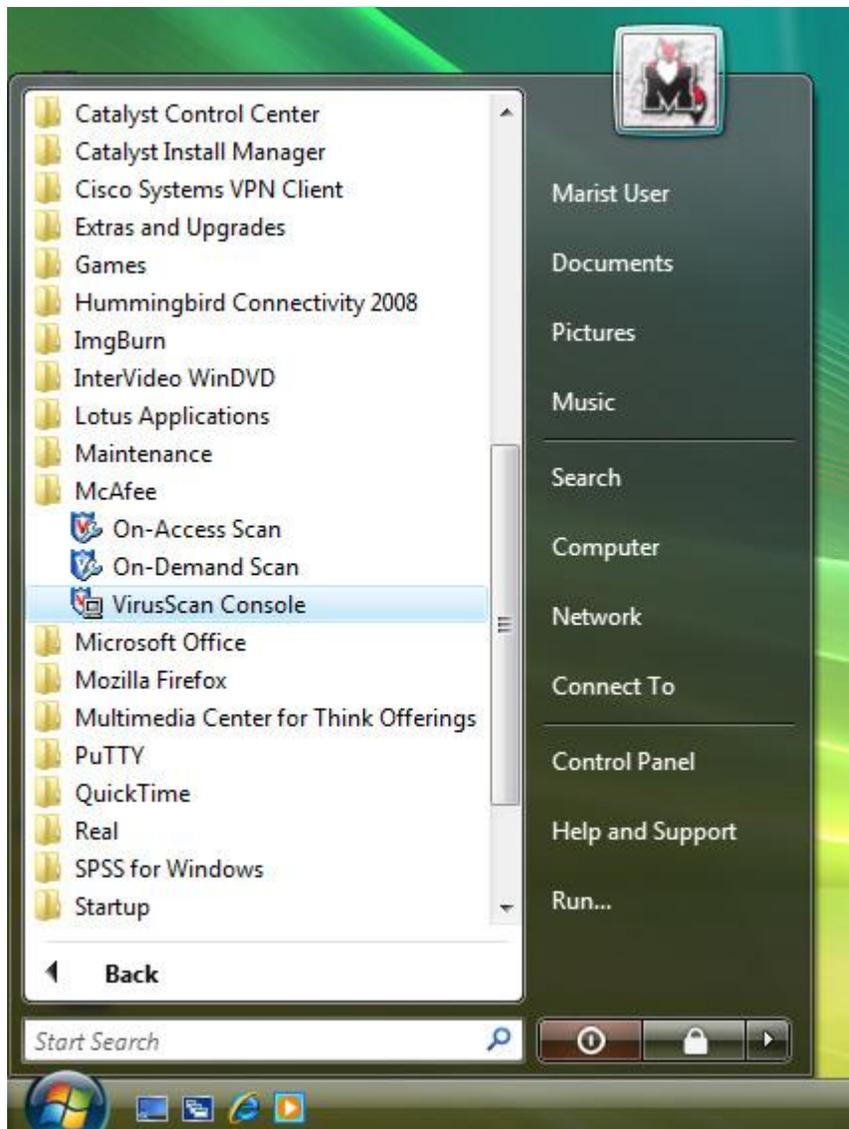

Option A:

^The McAfee VirusScan Icon

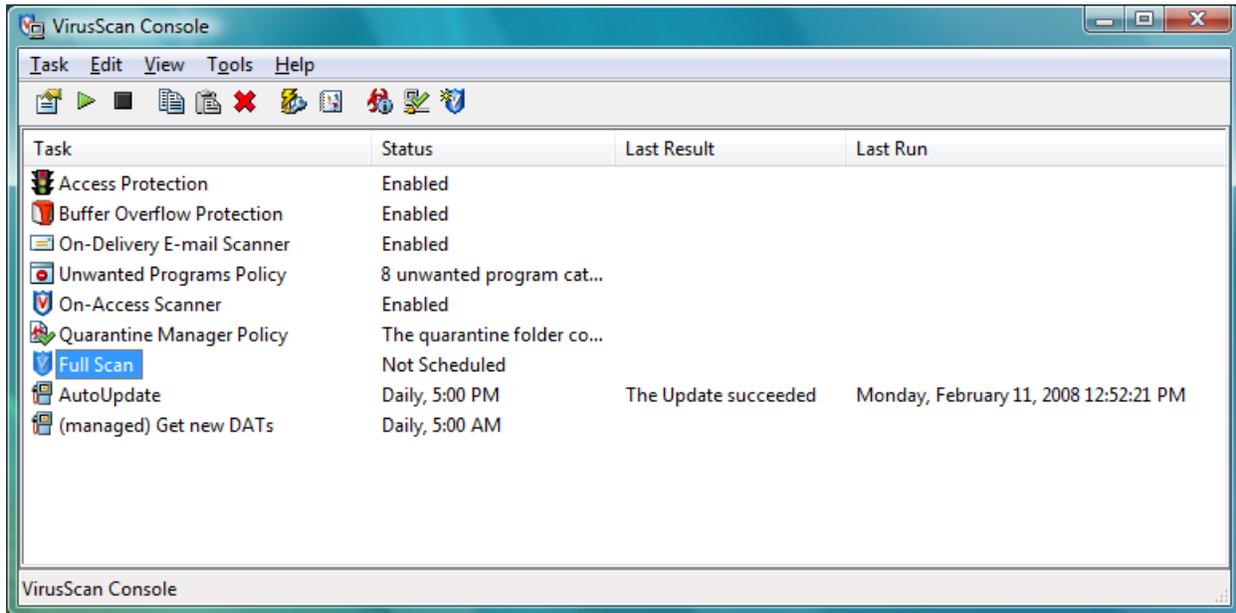

Option B:

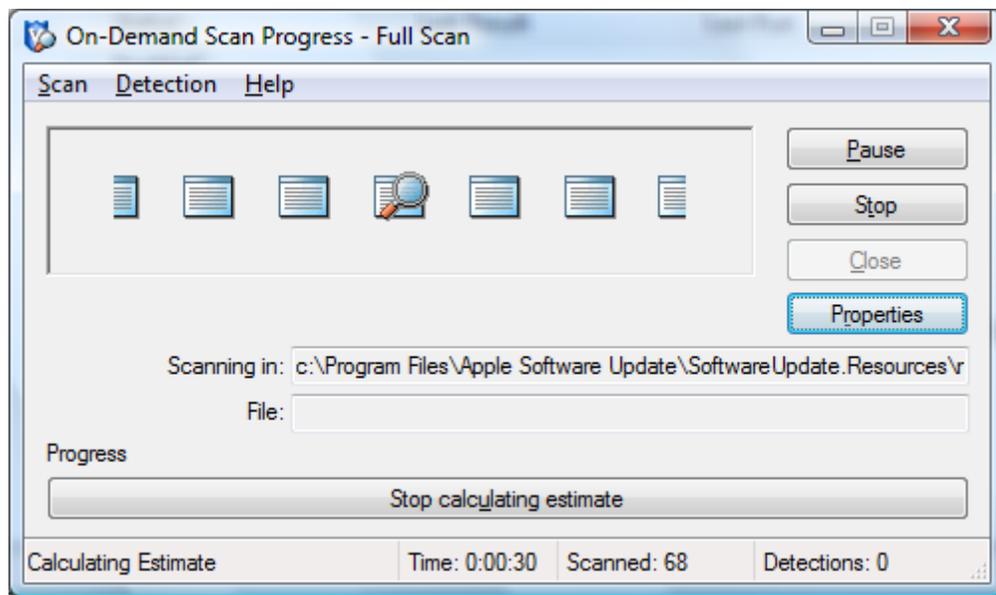

Update: 10/9/15

2. When the VirusScan Console opens, click "Full Scan" once to highlight it and then click the Start button (green "play" icon in the upper left) to begin a full system scan.

3. McAfee will scan your system memory and all physical hard disks for virus-infected files. This will take a while — usually between 30 minutes and 2 hours. Any files infected will be listed along with the remediation action taken (i.e., quarantined, deleted, cleaned, etc.).

If either of these steps is unsuccessful, please contact your agency help desk. For consolidated agencies, contact OA-Help Desk (717-783-1087).
